

Bait stations

The finest digital pest control
100% made in Germany

Robust and durable

All our stations are designed for long-term use. Instead of always buying new stations, you can rely on quality and robustness.

Tuned to eMitter®

For the perfect use of our eMitter® products, we have matched all stations to the eMitter® and Gorilla Traps® products. So you will not only find the right station for every application, but you can also easily upgrade them digitally.

For every area

Our bait stations are designed for all areas where snap traps or monitoring are used. Whether in warehouses, factories, private households, supermarkets - indoors or outdoors – you will always find the right station.

Snapbox

Single station for mousetraps

Our Snapbox mouse station is the perfect addition to your mousetraps (e.g. Gorilla Traps[®] mousetrap) and offers plenty of space for monitoring equipment. For security, the station is lockable with a universal key, so pets and children are protected. You only need one key for all Snapbox stations.

Vanguard

Station for rat traps

Our Vanguard Rat Station is the perfect complement to your rat traps (e.g. Gorilla Traps[®] Rat Trap) and offers plenty of space for monitoring equipment. For security, the station is lockable with a universal key, so pets and children are protected.

You only need one key for all Vanguard stations.

Runbox „Pro“

For the walking routes

Mice usually run along the wall and like to go through tunnel traps. The runbox is space-saving and is the obstacle for the mouse. No matter from which side the mouse enters; a catch is almost guaranteed.

The Runbox Pro is prepared for the use of 2 mousetraps (e.g. Gorilla Traps[®] mousetraps) and for our eMitter[®] Indoor Rocker.

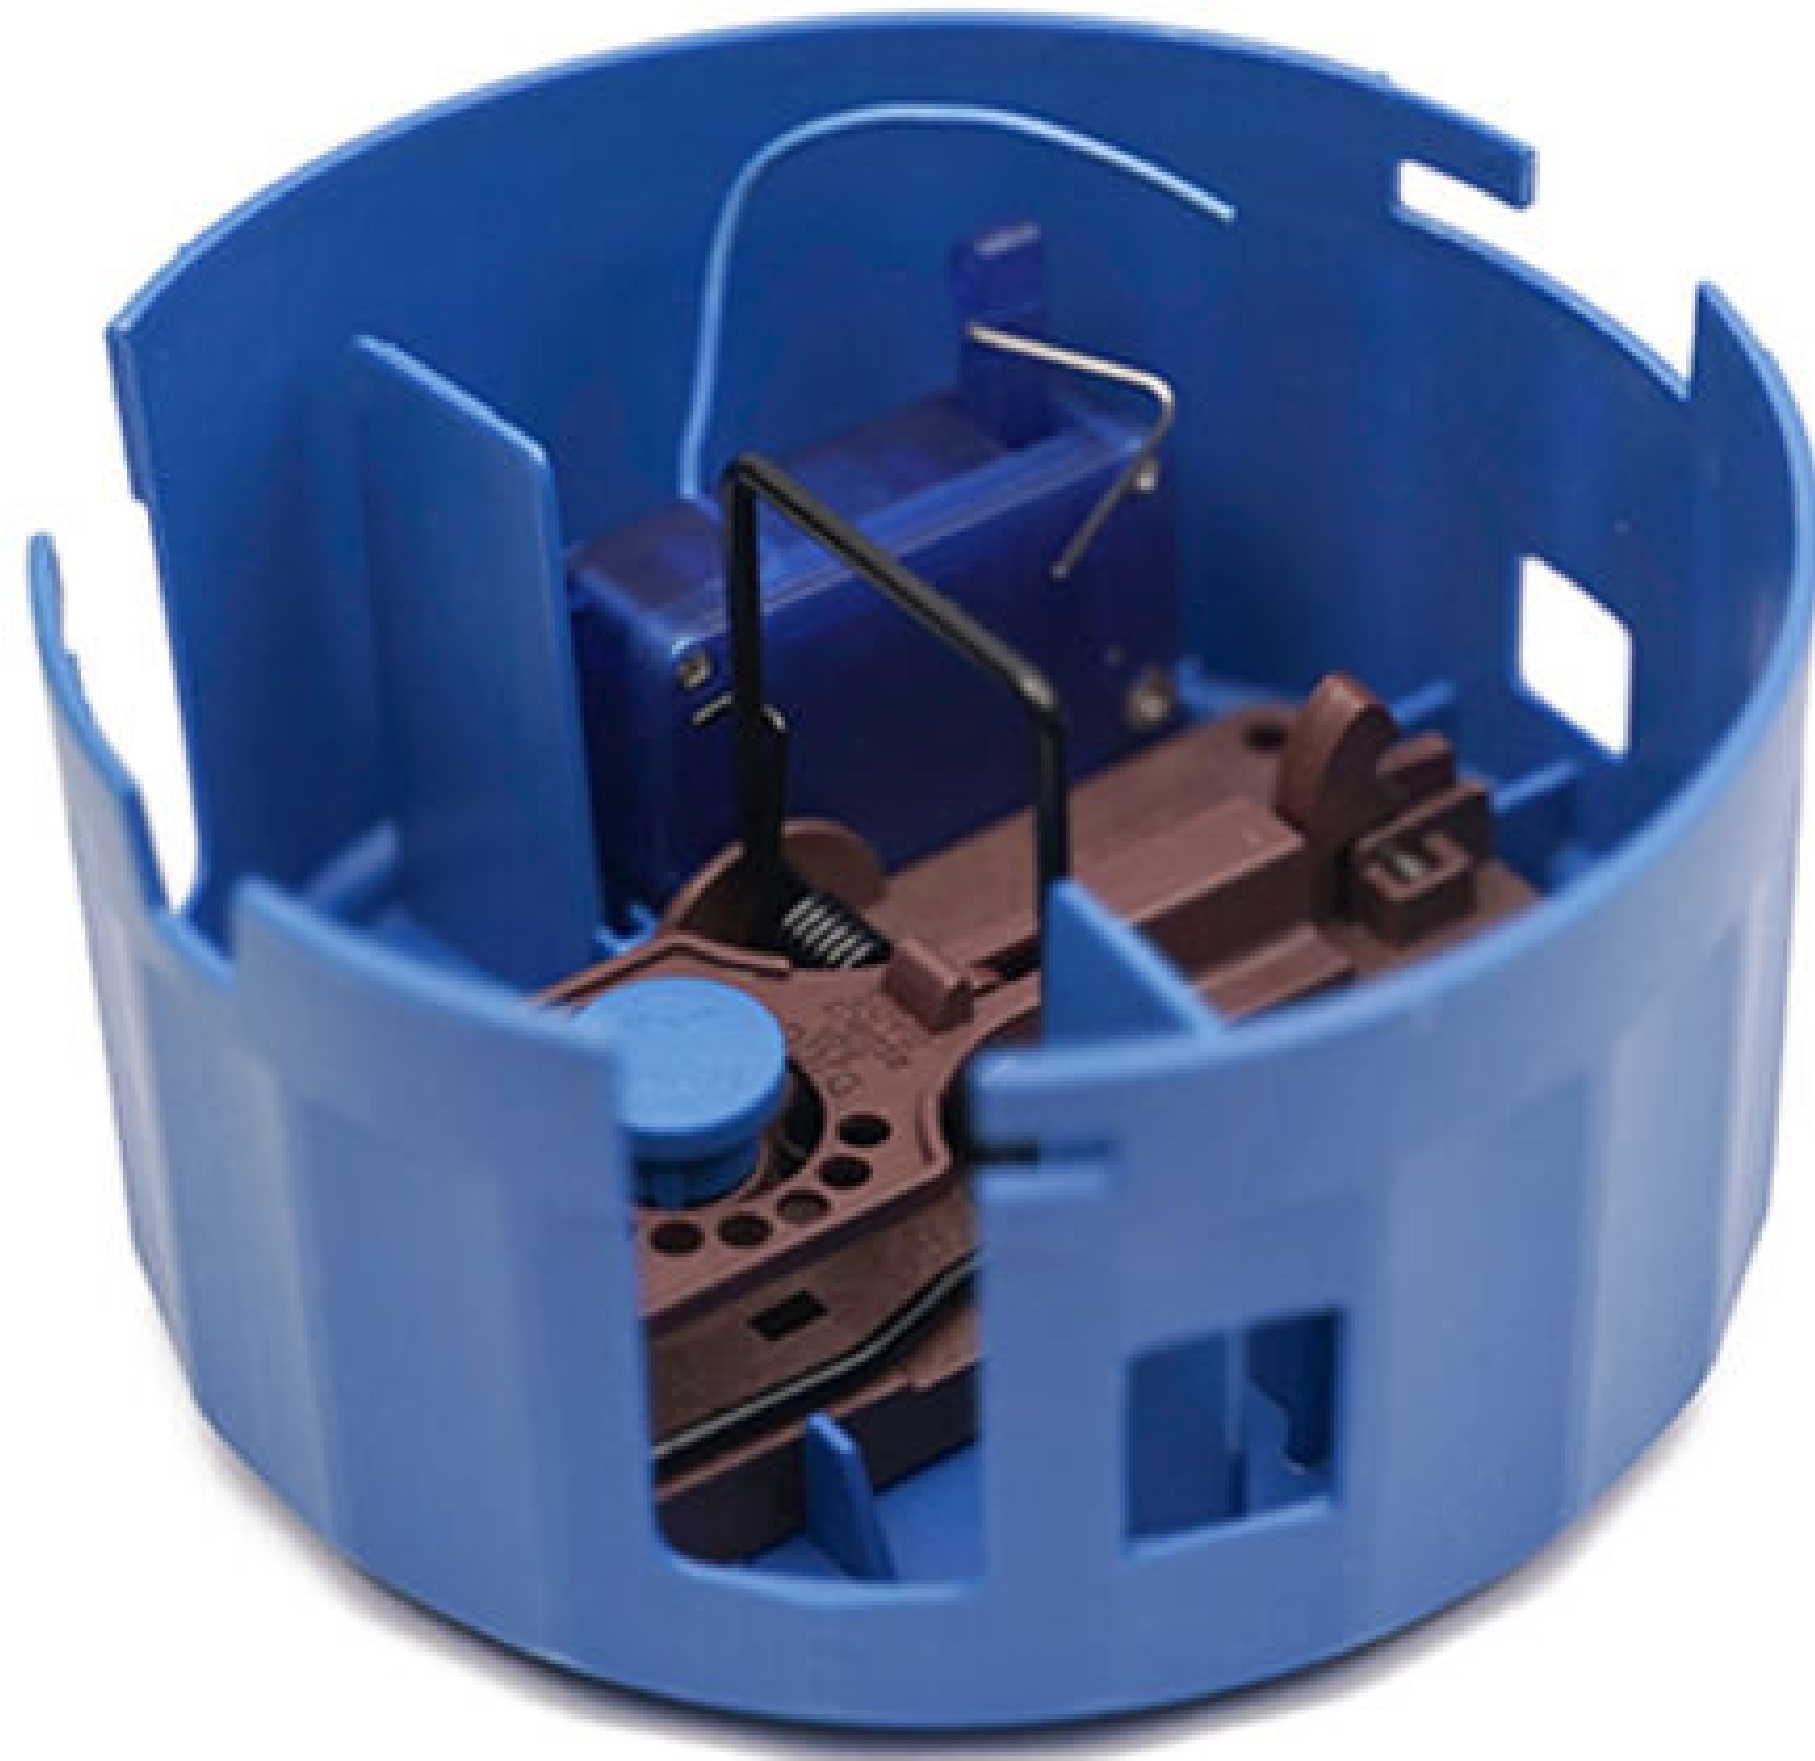

Runbox „Robust“

The robust alternative

The Runbox Robust is a simple, effective and space saving way to install up to two mousetraps (e.g. Gorilla Traps[®] mousetraps) and a digital transmitter from eMitter[®].

Swopbox

With indicator

The mouse bait station is equipped with a simple turning mechanism and can be opened by a simple turn. In addition there is a green lever that can be pushed outwards by activating the trap so that a closed trap is visible from afar! This station is universally applicable, because it can also be mounted vertically on the wall. When mounted vertically the bait does not get wet and no water can collect inside the box.
